

MANAGEMENT DEVELOPMENT PROGRAMME

Generative AI Fundamentals for Leaders

Prof. Anil Vaidya

Programme Director

Faculty, SPJIMR

Overview

Generative AI has been the evolution from earlier classical AI that has been used by business over the last decade. Classical or traditional AI is well known in business forecasting sales, predicting machine failures, foreseeing late flight arrivals etc. The Generative AI takes a step forward in creating marketing information, answering customer queries, authoring reports etc.

It's a new kind of technology about which managers of today's world need to be aware of. They need to be equipped with knowledge with advantages and possible deployment in business functions. The programme introduces the Generative AI concepts, dwells in technology background and moves onto Business relevant implementations.

The programme is aimed at provoking thoughts and ideas in the minds of participants.

This programme covers managerial aspects; participants won't need to have technical background. The technical understanding is covered in a separate programme.

Who Can Attend?

Middle and Senior Level Manager

Key Topics Covered

- Evolution of AI systems
- Generative AI introduction & concepts
- GenAI models and their uses
- Business applications of GenAI
- Deployment challenges and risks
